

Maximum Rotation Hydraulic Thumb

Rotation Innovation

PSM presents its new progressive link hydraulic thumb. Built for the specific purpose of more output, PSM has engineered a thumb that allows maximum rotation when working with a pin-grabber quick coupler. PSM's innovative design enables your hydraulic thumb to have a full range of motion extending out and around your quick coupler. With additional rotation, your thumb and bucket will extend the operating range of your excavator. The new PSM Maximum Rotation Thumb creates degrees of separation from the competition.

Like all PSM thumbs, this design uses T-1 steel components and is fully line bored with hardened pins and bushings for ultimate strength and longevity. Anti-torsion progressive links are used along with a dual cushioned cylinder to absorb shock and wear on your machine. For further information please contact a PSM Sales Representative at (800) 373 3514 or at www.psmcorp.com. "PSM, leader in quality attachments."
