

Uni-Body Concentric Thumb

Ingenuity Meets Versatility

PSM presents its U.S. patented Uni-Bodied Thumb design. Engineered and manufactured at PSM headquarters in Woodinville Washington, the original concept for this attachment was conceived in early 2004. Since this date, our prototype Uni-Bodied thumb has undergone one year of vigorous testing in the field and has surpassed all anticipated expectations. The versatility of this unit will maximize the circulation of your mini and small excavator fleet.

Mounting Brackets & Pins Magnified

The Uni-body thumb is assembled in such a way that it allows users to install and remove the entire package of thumb, cylinder, and frame from one excavator to another in a matter of minutes. Mounting brackets and cylinder anchors can be welded on your entire fleet of mini and small excavators making the Uni-bodied thumb compatible with all equally sized machines. This allows the ultimate versatility to be first in the dirt. The PSM Uni-Bodied Thumb is available with generic tooth spacing for excavators weighing between 5,000 – 30,000lbs. Contact a PSM Sales Representative for any questions at (800)-373-3514.
